*Hunter College of the City of New York
Department of Chemistry.*

April 3, 1948

The Chairman,
Physics Department
University of Sao Paulo,
Sao Paulo.

COPY

Dear Sir :-

The Brazilian Government Trade Bureau of New York recently called my attention upon the establishment of a Nuclear Energy Research Institute in your University, and suggested that you might be interested to secure the services of scientists trained in this new field.

Since I contemplate to stay in Brazil in the very near future, I should be particularly interested if this new Institute would offer an opportunity for employment, in either research or teaching.

So that you may become acquainted with my qualifications, I am sending you under separate cover a synopsis of my curriculum and experience. You will see that I am a physical-chemist whose research work dealt primarily with biophysical investigations applied to medical problems and biochemistry. From the list of my nearly 60 publications, you will see that I was among the first to become interested in the separation and isolation, and use of isotopes.

Fully appreciating your kind interest in advance, I am

Very truly yours.

Raymond Jonnard
Prof. Raymond Jonnard.
(formerly Ass. Pr. U. of Paris-
Sorbonne- and Fordham U. of N.Y.)

P.S. Evidently, I could teach either in French or English, or after a very short stay, in Portuguese.

R.J.
