Dear Professor Abraham de Moraes

I believe that it is
probable that you ^{are to have} Dr. David Bohm on
your staff in theoretical physics next year.
You are in this, very fortunate, and we
at Princeton are correspondingly
unfortunate. He is not only a very
versatile physicist but he has the
important quality of being attractive
to graduate students. This popularity
comes from the lucidity of his mind,
the wealth of his ideas and his
amiable and helpful character. He is
capable of lecturing effectively on
almost all subjects of modern theory.
I am personally of the opinion that
Dr Bohm will do exceptionally
well in a place where he will have his

own school with a few enthusiastic
students.

Dr Bohra is a very shy young man
but he has an attractive character
when one knows him.

Yours very sincerely

A. G. Shenstone

(Chairman, Dept of Physics)
