

March 21, 1953

Dr. Carlos Monge M.
Instituto de Biologia Andino
Apartado 281
Lima,
Peru

Dear Dr. Monge:

I include the manuscript which we presented at the Symposium of Physics held in Rio de Janeiro and S. Paulo in July, 1952. - It will be published by UNESCO in a volume which will contain all the works presented at the Symposium.

I am sure that Dr. Mattsson will send you a copy as soon as it is published. In this manuscript you shall find the results we obtained in Morococha.

The Centro Brasileiro de Pesquisas Físicas (Lattes, Camerini, etc.) are preparing a laboratory for Cosmic Rays At Chacaltaya (5.200 mt. altitude), one hour by car from La Paz. I worked with them a few months last year, but I am back in S. Paulo now.

G. Schwachheim has left the University of S. Paulo and is working for the Centro Brasileiro de Pesquisas Físicas. They are preparing themselves to work with Wilson chamber, G.M. counters, scintillation counters and photographic emulsions technique. I think they are doing fine. Here in S. Paulo I am preparing with two co-workers an experiment on multiple production of mesons.

Sincerely yours,

Andrea Wataghin
